Nutrition is a science and dietitians are the recognised experts in the field of evidence-based nutrition. There are many unscientific health and nutrition publications, fad diets and nutrition gimmicks around. When you consult with a registered dietitian, you are protected from misleading treatment and misinformation.

**WHY DO DIETITIANS NEED TO BE REGISTERED?**

Registration protects the public from nutrition misinformation.

By law, dietitians need to keep up to date with the latest nutritional information in order to remain registered, ensuring that anyone who makes use of their services is given the latest evidence based information.

All registered dietitians will gladly provide proof of registration upon request. In fact, you should ask to see proof of registration with the HPCSA when you see anyone claiming to be a nutrition expert.

RD (SA) is the notation used for registered dietitians in South Africa.

**WHAT IS A NUTRITIONIST?**

A nutritionist is responsible for the promotion of nutrition health and well-being and prevention of nutrition related disorders of groups or populations, throughout the various stages of the life cycle. However, unlike dietitians, nutritionists cannot provide therapeutic nutritional advice for medical conditions.

A nutritionist is also registered with the HPCSA.

**WHAT IS ADSA?**

The Association for Dietetics in South Africa (ADSA) is the professional organisation for registered dietitians.

**ADSA’s VISION**

To represent and develop the dietetic profession to contribute towards achieving optimal nutrition for all South Africans.

**ADSA’s MISSION**

As the registered professionals in the field of dietetics and nutrition, we support and promote the continued growth of the profession of dietetics in South Africa.

If it’s about nutrition, ask your dietitian!

The primary aims of the Association are to serve the interests of dietitians in South Africa and promote the nutritional wellbeing of the community.

Should you need the details of a registered dietitian in your area visit: www.adsa.org.za or email info@adsa.org.za
WHAT CAN A DIETITIAN DO FOR ME?

Dietitians are the experts in weight management and nutrition. Obesity is only one of many nutrition-related conditions that dietitians can treat. The cornerstone of good health is sensible nutrition, and dietitians draw on science-based education and experience to provide food and nutrition services while helping individuals make positive lifestyle changes tailored to their unique needs. Whether therapeutic nutrition or preventative nutrition, dietitians promote good health and wellbeing for all.

WHAT IS A DIETITIAN?

- A qualified health professional registered with the Health Professions Council of South Africa (HPCSA)
- who has a minimum qualification of a four year Bachelor of Dietetics or Bachelor of Science in Dietetics degree or a two-year post-graduate nutrition and dietetics degree*
- with training in all aspects and fields of nutrition therapy
- Dietitians are the only qualified health professionals that assess, diagnose and treat diet and nutrition problems, both at an individual and at public health level.
- Dietitians use the most up-to-date evidence on food, health and disease, which they translate into practical guidelines to enable people to make appropriate lifestyle and food choices.

PRIVATE PRACTISING DIETITIANS

- Consult clients/patients who need advice on nutrition therapy for their condition or need to make lifestyle changes which would include healthy eating.

Some medical conditions managed by dietitians in private practice and hospitals

- Diabetes, heart disease (high blood pressure, high cholesterol), stroke, liver disease, kidney disease cancer, HIV/AIDS, TB, throat, stomach and intestinal disorders (inflammatory bowel disease (IBS), Crohn’s, ulcerative colitis, diverticulitis, constipation, flatulence, diarrhoea)
- Food allergies and intolerances
- Eating disorders

Dietitians are also trained in providing specialised nutritional advice for:

- Sports nutrition
- The various stages during a person’s lifecycle, e.g. pregnancy, infancy, childhood, adulthood, the elderly

CLINICAL DIETITIANS

Mainly work in a hospital setting (in both the private and public sectors) where they consult patients referred by doctors and other health care staff, assessing and individualising nutrition therapy as an integral part of the patient care team and prescribing an appropriate special diet, tube feed or intravenous feed

COMMUNITY DIETITIANS

- Work in the public sector but may also be employed by non-governmental or community based organisations
- Focus on promotive, protective and supportive community nutrition interventions

CONSULTING DIETITIANS

- Offer their expertise in the field of nutrition to the food, nutrition, healthcare and pharmaceutical industries. They also often provide input to the media on nutrition-related topics.
- Advise their clients on:
  - Current food labelling legislation, nutrition regulations and conduct nutritional analyses of food items
  - Product development
  - The latest developments and trends in nutrition
  - Nutrition-related marketing activities
  - Literature reviews

FOOD SERVICE MANAGEMENT DIETITIANS

- Manage the provision of healthy and specialised diets to persons in various institutions such as health care facilities, correctional services, welfare care settings, school hostels and old age homes
- Plan, cost and develop menus
- Control, implement, evaluate and oversee food service systems including the purchasing, storage, preparation and serving of foods and beverages
